Valley Home Health, Inc.

Dear Doctor,

Your patients deserve EXCEPTIONAL home health care every day. In order to provide this enhanced level of care, we have partnered with HomMed™, LLC. HomMed™ Health Monitoring System will be utilized in selected patient's home to collect subjective and clinical data such as: heart rate, blood pressure, oxygen saturation, temperature when necessary, and weight. Peripherals such as a glucose meter and ECG can be attached for specialized patients. Each morning, the monitor talks the patients through the process in the language of their choice and automatically transmits the data to our offices where our staff will clinically review their condition and respond appropriately. This data is stored in a central station at our offices and is available to the patient's physician at any time. You provide your patients with the highest quality of care in your office, we will extend that care to their homes. If you should have any questions or need further information, please contact our office at (818) 509-6764.

*Thank you,
Valley Home Health, Inc.*

MEDICARE CERTIFIED

JCAHO ACCREDITED

What are the benefits of home monitoring system?

For the Physician:

- **Creates strong patient satisfaction and loyalty to the physician and practice.**
- **Helps the physician be more pre-emptive in patient care, allowing for adjustments to the treatment plan or medications**
- **Complete objective, clinical patient data is available to the physician at any time**
- **Your patients are in good hands!**

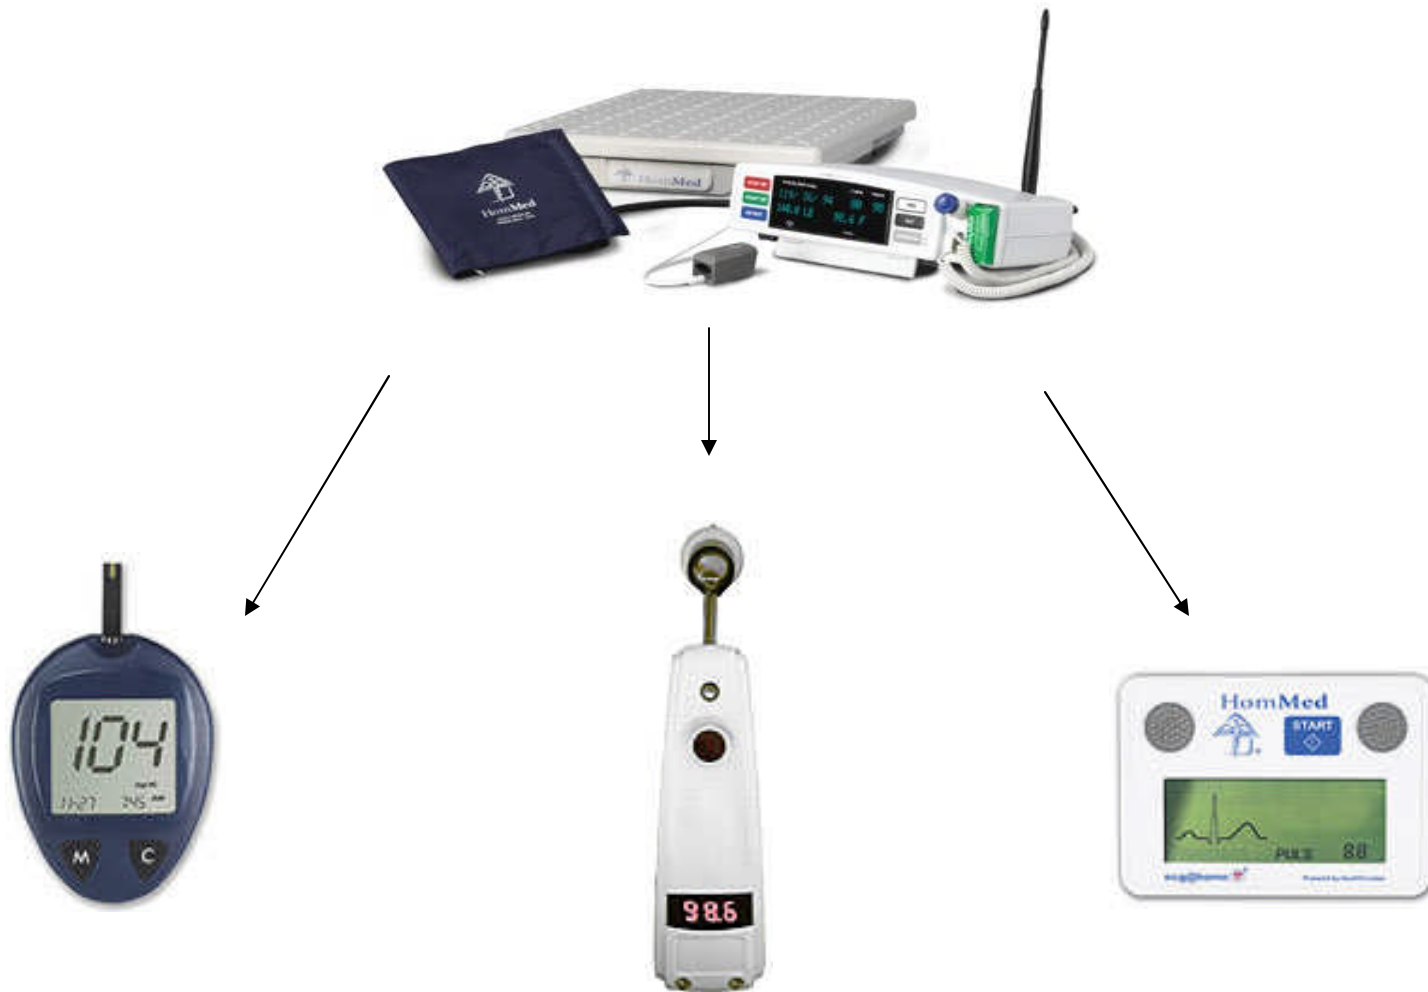

For the patient and family:

- **Encourages patient self-management by reinforcing positive behavior and lifestyle changes.**
- **Gives concerned family members the peace of mind that a professional clinician is monitoring the patient on a daily basis and communicating important information to the physician.**
- **Allows patient and caregiver participation in the plan of care producing better maintainable outcomes.**

For the home health agency:

- **Improves communication between all members of the care team.**
- **Empowers nursing staff by providing trend-over-time data, ensuring continuity of care.**

HomMed™ Home Monitoring System

Blood Glucose Device

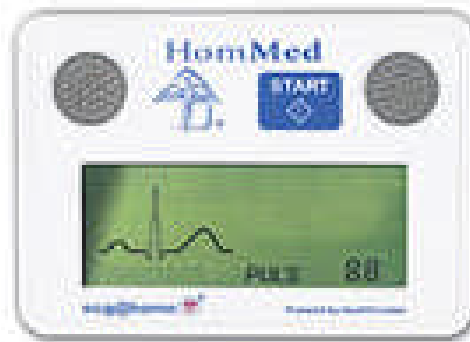

HomMed™ Monitors interface with several commonly used glucose meters that monitor blood glucose levels and can transmit up to 12 of the most recent readings.

Temporal Thermometer

Temporal Thermometer interfaces with HomMed™ Monitoring System and provides a quick, accurate, non-invasive method for measuring body temperature by scanning the forehead over the temporal artery.

ECG

HomMed's ecg@home™ ECG device is used exclusively with HomMed™ Monitors. It records and stores the patient's electrographic heart signals. With its patented built-in electrodes, the device captures ECG leads in a noninvasive manner. The ecg@home device will store and display ECG tracing along with deviation of the ST segment of wave and duration of the QRS.

***INRatio™ Meter**

PT/INR TESTING AT HOME

***CLIA waved**

***FDA Approved**

The HemoSense INRatio™ meter is a diagnostic Point Of Care system that provides Prothrombin Time (PT) and International Normalized Ratio (INR) results using fresh capillary whole blood. The INRatio™ system reduces the headache of oral anticoagulation management, is easy to use, and features on-board quality controls with every test.

The meter reports results within 2 minutes, greatly reducing overall test time and the time-consuming hassle of repeated clinic/lab follow-up.

Frequently Asked Questions

Which patients should be considered for referral?

Recommended criteria include patients with:

Recent hospitalization or ER visit for existing chronic conditions

Any condition requiring frequent monitoring or trending of vital signs to facilitate clinical management

Chronic care needs who can avoid admission to alternative living facilities if monitored at home

History of poor compliance with diet, medications, or self-monitoring of chronic conditions

How does monitoring affect follow-up office visits?

Prompt communication of abnormal parameters and routine trend reports allows the physician to detect subtle changes in clinical status before the patient's condition deteriorates

This proactive approach to patient management allows the scheduling of more appropriate follow-up visits for the purpose of making incremental clinical modifications to the treatment plan

What is the cost to my patients for home monitoring?

Valley Home Health, Inc. accepts Medicare, Blue Cross Health Insurance, SecureHorizons MedicareDirect and Kaiser Permanente patients

Medicare eligible patients who are referred for home care services and meet the selection criteria will be monitored at NO COST

Patients not covered by Medicare or other health insurance, have the option of being monitored for a nominal fee
